

Creating a Get URL Action
SorBose, Inc. All Rights Reserved. www.sorbose.com

You will need the following file for this tutorial, [geturl fla](#)

1. Open a new movie
2. Click Insert=> New Symbol to create a new symbol. Set the properties to that of a button. On your button stage draw a rectangle. Click back to your scene 1.
3. Open your library by clicking the menu item: window=> library or F11
4. Place the button on the stage by dragging it from the library to the stage in frame 1
5. Open the actions panel by clicking the menu item: window=>actions. It will appear below.
6. Click once on the button on the stage to highlight it.
7. While the button is highlighted on the stage, click the + sign on the upper right side of the actions panel, select Actions => Browser/Network => getURL

8. The script for GETURL will be written in the white box. Down below is a blank for URL. Type in the full URL. Flash does not like relative URL's here. (i.e. <http://www.yoururl.com>).

9. In the box for Window, select one of the following from the drop down box:

- `_blank` for new window
- `_parent` for the same window
- `_top` for replacing a frameset window
